# Go for COLOR!

The surprising influence of colors on the brain does no longer need to be proven today: blue stimulates creativity, green improves concentration, red increases productivity... Activate a performance driver by choosing colors for your well-being and motivation but also according to your objectives!

Available in an infinite range of colors and possibilities, to be combined or not with the latest technologies, the GLASSBOARD range of glass boards, in wall or mobile versions, offer real opportunities to design convivial, exchangeable and innovative spaces. With its natural luminous and decorative appearance, the glass blends in perfectly with raw materials such as wood, metal or stone. In addition to the indispensable color, it adds a touch of design to interior spaces, offices or even schools.

## CREATE TO INSPIRE

Our lacquered and colored glass, made of 4 mm thick tempered or laminated glass, combines an infinite range of colors and the unlimited possibilities of digital printing with the depth and elegance of glass. Whether you want specific dimensions or colors, digital printing of a decoration or logo, all these options are available to display totally personalized and unique images.

## PERFECT INTEGRATION

In order to enable simple, instant, fluid and personalized interactions with your entire ecosystem, VANERUM solutions perfectly integrate the latest technologies such as an interactive touch screen.

## TOTAL COMFORT

The ultra-smooth glass provides a communication surface that is naturally easy to write, draw and erase. Moving your dry erase markers or liquid chalk markers is a delight! The glass is extremely easy to care for and maintains a new look: it can be cleaned with a clean microfiber and is resistant to most chemicals. Thanks to a galvanized sheet fixed to the rear of the surface, the glass allows you to display with strong magnets and to use accessories (eraser, marker holder...) magnets.

## HIGH DURABILITY

We use A+ rated glass for indoor air emissions and safety in case of glass breakage. Their resistance and stability provided by the galvanized sheet metal ensures a life span probably equivalent to the life span of the wall on which they will be installed.

# GLASSBOARD VOGUE

Make the most of your square meters by bringing functionality and user-friendliness to all your walls, wherever they are, with the GLASSBOARD VOGUE board, which provides an XXL magnetic writing and display surface in addition to a sliding surface.

This spectacular two-level system has a concealed wall mount and rubber wheels to ensure quiet sliding. Thanks to its flexible design, this dynamic solution allows you to play with colors and perfectly integrate technology such as LCD touchscreens by facilitating cable management.

# GLASSBOARD SALSA

The GLASSBOARD SALSA (H155xW60 cm) board is frameless and has a solid base. It elegantly follows you whether you want to improvise a meeting or display an information note in a reception hall. Combine wall and mobile GLASSBOARDS in a unique way to create a flexible, inspiring and user-friendly environment that all users can easily master to experience the most motivating and exciting exchanges!

The minimalist, very modern GLASSBOARD FREEZE board is provided with an invisible wall fixing system which, by moving it away from the wall, gives a real impression of lightness. Whether you choose the in standard or customized colors and sizes, you will always be able to add a touch of sophistication and creativity to any space.
